Where the advertiser cannot deliver what he advertises, Therefore we always try to Deliver the Goods

This week two more residences were started in Grand View---bringing the total cost of homes now under construction in the Country Club District up to \$62,000. May we not have the privilege of showing you this section? That is all we ask---our confidence in its superiority is such that we believe an investigation will mean a purchase. Note the character of the improvements.

Home of E. E. Eck, Fort Boulevard

Grand View Addition Designed and built by Perry & Kirkpatrick

Excellent Car Service

Recently the Street Car Co. installed a 20 minute service to Grand View during the rush hours and a convenient schedule is maintained during the day. The cars are of the largest type and during the rush hours trailers are added.

Grand View

has modern conveniences, including electricity, purest Mesa water, telephones, etc. It is located on high ground with a magnificent view. The air is pure and invigorating and absolutely free from the smoke and dirt of the city.

Lots are still being Sold on the Original Company Terms of

\$10.00 Down and \$5.00 Each Month.

Prices Reasonable.

POWERS SHIPS RICH SILVER ORE; MORNING GLORY SELLS FOR \$50,000

Copper Output in Courtland District Is Richer Than Ever Before.

(By H. L. Davis.)
In the Patagonia district Frank Powers, owner of the World's Fair mine, is making a shipment of high grade silver ore, of which he expects to load 1000 sacks, which will run \$100 to the sack of ore, as per assay. This is hauled to railroad under guard, two armed men guarding each wagonload and a guard at the car, heavily armed, during each eight hour watch. The total value of the one carload shipment will be over \$100,000. This will be sent under guard to the Selby smelting and refining works near San Francisco.

Morning Glory Sold.
The Morning Glory mine, west of the Mowry mine, has been sold by Chris Wilson to Colin Cameron, of Tucson, representing the Ajo Copper company, of Gila Bend, for \$50,000. The purchasers will run a 500 foot tunnel into the mountain below present workings to drive them. It has been a shipping mine.

A rich strike is reported made by Lou Stevens, leaser on the Blue Eagle mine, located near the Three R's, and he has now on the dump 60 tons of ore averaging \$74.10 per ton in silver and copper.

Courtland-Cienega District.
The copper output in Courtland district is larger than ever before in its history. The Great Western mine is continuously shipping to the El Paso smelter about 15 cars of ore a week; the Calumet and Arizona is shipping 12 cars a week to the Douglas smelter, and the Leadville mine is shipping five cars a week, all making a total of 35 cars of ore a week. Courtland is becoming very lively again, and at Gleason there is much building going on. Daily trains are now running from Douglas.

Ribbee-Warren District.
Ore is now for the first time being shipped direct to the smelter from the Briggs shaft of the C. and A. company. Heretofore its output was through the Houston shaft. This company has been shipping 28 carloads of ore daily to Douglas and three to El Paso. Five car loads of ore a day are also shipped to its Douglas smelter from the Shattuck, and Courtland ships three cars daily to the Douglas smelter at the C. and A. smelter are 1500 tons.

A conservative estimate of the daily ore shipments from all the mines of the Warren district at this time, is 100,000,000 pounds.

Shannon mines during the past 10 months was 12,712,000 pounds, an increase of 1,275,000 pounds over the first 10 months in 1911. The total net profits of this company for the fiscal year ending August 1, 1912, amounted to \$595,738. From three levels, 125 tons a day are being mined. Important new work is to begin during next year. An exploratory tunnel is to be driven from a point 25 feet above the Shannon ore bins in Chase creek and driven a distance of 1500 feet, cross cutting the main ore formations at a depth of 800 feet vertically below the Carter level.

Jerome District.
Chemical tests of the oil of the Jerome Oil company, prove it to be of the highest grade paraffin.

The showing of giant ledges of gold and copper ore, carrying high values at the mines of the Arizona-Empire Copper Mines company, 10 miles above Parker, in northern Yuma county, is attracting wide attention and causing a great excitement. The lower East tunnel discloses high grade copper ore, the entire face of the drift showing an average of 52 percent copper. The same class of ore is found in the upper workings being black oxide of copper. Floyd Brown has closed contract for hauling ore from the American Eagle mine to Vidal station in a six ton auto truck.

Prescott District.
The tunnel in the Billy Boy claim, Hassayampa camp, has reached a length of 215 feet, with ore the entire distance. A new assay of ore shows value of \$20 per ton.

Benson District.
Manager A. C. Simkins is erecting a five stamp mill on the Massolett gold mines in Little Rincon mountains, 14 miles north of Benson, to be completed by the first of next year.

San Juan Camp.
Tom Johnson, superintendent of the Peabody mine, is shipping constantly to the El Paso smelter. The shipments for the past seven months amount to nearly \$20,000. The ore is copper carbonates and oxides. The Arizona United is working a large force of men and shipping to Douglas. Over 200 men are employed in the camp.

Santa Rita and Hurley.
Thirty new houses are under construction at Hurley and on the mesa west of town, the residential section. The plans of a new Marion 100 steam shovel, to be installed at Santa Rita, are made, and the shovel will soon arrive and be operated in the big cuts in Santa Rita. It is the latest model in steam shovels, having a 50 foot boom and a 30 foot dipper handle.

Apache Creek District.
The Twin Peaks Mining company has made good progress in the construction of its 100 ton concentrator. The foundations have been made for a 25 ton mill by making a change, which is to replace the four Huntington mills with Chilean mills at a cost not to exceed \$5000.

Mogollon District.
Custom ore is now being received from three different properties and two more are setting ready to ship to the Socorro mines milling plant. Fine ore is coming from the lowest levels of the mine. The shaft is going down steadily to the 300 foot level. The daily average tonnage handled in the mill is 165 tons.

Work has just begun on the Triller group and it is the intention to ship

Insurance Rates

To obtain the lowest rate is ONLY ONE of the duties of an Insurance Agent. He should have the technical knowledge of the legal decisions affecting Insurance Policies, in order to draw up a form of contract that will absolutely protect the insured in the event of a fire. The contract should be broad enough to allow the assured all the privileges necessary for the conduct of his business, some features of which may be prohibited unless a special concession is made. In short, he must be your Insurance Counsel. DO YOU KNOW THAT YOUR POLICIES PROTECT YOU? It will cost nothing to get our advice.

Our long experience is at your service.

ore to one of the custom mills. A gasoline hoist will be installed.

Jicarilla District.

Recent work has verified the reports of the discovery of large gold bearing veins. Long trenches and cuts have been made across the side of the hills and demonstrated a ledge several hundred feet wide of low grade, milling ore running \$4-gold per ton. Plans are arranged by the Chicago company that has taken over the property to install a 100 ton mill and granite plant. The properties were discovered by W. A. Franklin and consist of four claims, of which the Sallie Darling and Mogul are the principal ones, and are at the foot of Ancho peak in Sallie gulch, in Jicarilla mountains.

Borro Mountain District.
The Phelps-Dodge company has commenced work at Leopold on a tunnel that is to connect the mines there with the Chemung mines at Tyrone. The length of the tunnel will be over 7000 feet and large enough to permit the running of large ore cars through it, which will be operated by trolley. The work will require one year to complete.

Lordsburg District.
The Eighty-Five mine is shipping about 300 tons of copper ore daily to the Douglas smelter. Manager O. Rylock is shipping several carloads a week of rich copper ore to the El Paso smelter from the Bonnie mine.

ARRANGE TO COMPLETE OIL WELL NEAR TUCUMCARI
Tucumcari, N. M., Dec. 7.—S. T. Shore and Henry Hicks, of Hereford, Tex., met with a number of local business men this week with the object of arranging for the completion of the oil well, which has reached a depth of over 14 feet, under the management of the Bad Lands Oil company. The principal capital up to this time has come from the Texas point, but now it is said that aid is sought from Tucumcari because of the increased cost of sinking the well. A committee acted upon the proposition made.

SENSATIONAL IS ORE STRIKE MADE

Malachite and Azurite Ore Found in Leadville Mine, at Courtland.

Douglas, Ariz., Dec. 7.—Some real "picture rock" was brought to Douglas by Appollis Fuller, who, with O. L. Kees, recently took bond for half a million on the Leadville property at Courtland. The ore consisted of Malachite and Azurite, at least 100 pounds being in the collection. Fuller said it came from the 200 foot level of the property. He was reticent as to the quantity of this ore in sight, but from other sources it is learned that the most sensational strike in the history of Courtland was made this week when a large body of these high grade copper bearers was struck on the 200 level of the Main of Sunshine claim. The property is now shipping about three carloads weekly to El Paso, but will increase the rate of shipment immediately under arrangements completed by Mr. Fuller, to one car daily. About 40 men are now employed in the mine.

Deal Falls Through.
The people of the Patagonia district are not in the least discouraged by the announcement that the Copper Queen company has decided to relinquish its bond upon the World's Fair property, according to W. H. Worthington, of

WORK IS PROGRESSING ON

BIG TUNNEL AT LEOPOLD

Silver City, N. M., Dec. 7.—Work on the big tunnel that is to connect the Chemung copper mine at Tyrone with the mine at Leopold, is progressing with a large force of men. When the proposed shaft is sunk midway between Tyrone and Leopold, the tunnel force of men will be increased.

Mining at Pierre is active, the Colorado Fuel and Iron company sending out vast quantities of ore daily.
